

FM3585

0.5 to 7.125GHz SPDT Switch for WiFi

Features

- Broadband frequency range: 0.5 to 7.125GHz
- Ultra low switching time: 150ns
- Low insertion 0.80dB@6.0GHz
- Input 0.1dB compression point: 33dBm
- Small, QFN (6-pin, 1.0mm x 1.0mm x 0.45mm) package, MSL1

Applications

- WLAN 802.11ax/ac/b/g/n networks
- WLAN repeaters
- ISM band radios
- Low power transmitting and receiving systems

Description

The FM3585 is a CMOS silicon-on-insulator (SOI), single-pole, double-throw (SPDT) switch. The high linearity and ruggedness performance and extremely low insertion loss makes the device an ideal choice for WLAN applications such as 802.11 a/b/g/n/ac/ax.

The FM3585 SPDT switch is provided in a compact 1.0mm x 1.0mm x 0.45mm 6-lead QFN package. A functional block diagram, pin configuration and package are shown in Figure 1. Signal pin assignments and functional pin descriptions are provided in Table 1.

Notice3

Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.
